

This framework (and the double diamond approach which underpins it) is now being used to develop the next stage of the project. The objective of this next stage is to develop a scalable and repeatable model for building an understanding of the customer for MaaS across the whole of Queensland. This process, using a combination of qualitative and quantitative research is aiming to provide a set of resources that can then be used in future by potential MaaS operators in Queensland to better understand how to tailor their product to meet the needs of the customers in their target area, regardless of where in Queensland that happens to be.
